BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cyclic peptide; antithrombotic; cardiant; antiarteriosclerotic; cytostatic; osteopathic; antiinflammatory; antibacterial; antipsoriatic; vulnerary; cerebroprotective; antianginal; antidiabetic; nephrotropic; ophthalmmological; antiarthritic; antirheumatic; antidiecer; vasotropic; neuroprotective; alpha vbeta 6-integrin receptor; thrombosis; tumor; cardiac infarction; coronary heart disease; arteriosclerosis; fibrosis; osteoporosis; inflammation; infection; psoriasis; wound healing.
                                                                                                                                                                         The invention relates to the identification of complementary peptides by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relevant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and drugs for drug discovery and as lead ligands for drug design and development. The present sequence is a complementary peptide from Saccharomyces cerevisiae.
                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                           ;

This invention describes novel cyclic peptides (1), containing 8 amino acid residues and optionally further alpha,omega-aminocarboxylic acid residues. Cyclic peptides of formula Cyclo (Arg.X.1-Axg.X.1-X.2-X.3.X.4-X.2-X.5-X.6-X.1) (1) and their salts and solvates. X.1 = Ser, Gly or Thr: X.2 = Leu, Ile, Nle, Val or Phe: X.3 = Asp, Glu, Lys or Phe: X.4 = Cdly, Ala or Ser: X.5 = Leu, Ile, Nle, Val or Phe: X.4 = Arg, Har or Lys: R.1 = One or more omega-aminocarboxylic acid residues, having a length of 50-2500 mum; or is absent; the amino acid residues are optically active aminoacids). The products of the invention have coptically active aminoacids). The products of the invention have antinfilammatory, antibacterial, antipsoriatic, ophthalmological correspondant, antiardianel, antipsoriatic, ophthalmological, antirheumatic, antilucer, vasotropic, nephrotropic, neuroprotective. (I) are used for treating diseases involving expression and pathological function of alpha_beta_6 integrin receptors, especially thrombosis, cardiac infarction, inflammation, infection, psortasis and products of the aling deflictency. Other discloses of the antiplocal function of alpha_beta_6 integrin receptors, especially and antip advanced deflictency, other discloses of the antiplocal function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              would menting delicemry. This invention describes novel cyclic peptides (I), containing 8 amino acid residues and optionally further alpha,omega-aminocarboxylic acid residues and optionally further alpha,omega-aminocarboxylic acid cresidues. Cyclic peptides of formula Cyclo-(Arg X1-Nsp-X1-X2-X3-X4-X2-X6-R-I) (I) and their salts and solvates. X.1 = Ser, Gly or Thr; X.2 = Leu, IIe, NIe, Val or Phe; X.2 = Arg, Har or Cily, Ala or Ser; X.5 = Leu, IIe, NIe, Val or Phe; X.6 = Arg, Har or Lys; R.1 = one or more omega-aminocarboxylic acid residues are length of 50-2500 mum; or is absent; the amino acid residues are cortionally derivatized and include b- as well as I-forms (in the case of optionally active aminoacids). The products of the invention have cortionally active aminoacids). The products of the invention have antiinflammatory, antibacterial, antigasoriatic, ophthalmological, crebroprotective, antibacterial, antigasoriatic, ophthalmological, crebroprotective, antibacterial, antigasoriatic, ophthalmological, neuroprotective, antibacterial, antidated of incepton, neuroprotective, antibacterial, antidated of incepton, portropic, or antibacterial, antidated of alpha, obeta, or integring and acid action, coronary heart diseases, arteriosclerosis, twomad healing deficiency. Other disclosed diseases (a.g. diabetic retinopathy, macular degeneration, impopia, ocular histoplasmosis or colletis, cronn's disease, atherosclerosis, retenopathy, macular degeneration, mayopia, ocular histoplasmosis, and colletis, cronn's disease, atherosclerosis, retenopathy, macular degeneration, mayopia, ocular histoplasmosis, and colletis, cronn's disease, atherosclerosis, also be useful in analytical biology and molecular biology; e.g. take to prepare affinity chromatography columns for purifying integring co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New cyclic peptides, are alpha(v)beta(6) integrin receptor inhibitors useful e.g. for treating thrombosis, coronary heart disease, tumors, osteoporosis, inflammation or infections

Integrin alpha-Vbeta-6 cyclic peptide inhibitor #9.

Cyclic peptide; antithrombotic; cardiant; antiarteriosclerotic; cytostatic; osteopathic; antiinflammatory; antibacterial; antipsorlatic; vulnerary; cerebroprotective; antianginal; antidiabetic; nephrotropic; ophthalmological; antiarthritic; antinheumatic; antillocer; vasotropic; neuroprotective; alpha_vbeta_6-integrin receptor; thrombosis; tumor; cardiac infarction; coronary heart disease; arteriosclerosis; fibrosis; osteoporosis; inflammation; infection; psorlasis; wound healing.

New cyclic peptides, are alpha(v)beta(6) integrin receptor inhibitors useful e.g. for treating thrombosis, coronary heart disease, tumors, osteoporosis, inflammation or infections

Claim 3; Page 5; 20pp; German.

This invention describes novel cyclic peptides (I), containing 8 amino acid residues and optionally further alpha omega-aminocarboxylic acid residues. Cyclic peptides of formula Cyclo-(Arx-X-1-Asp-X-1-X-2-X-3-X-4-X-X-X-6-R-1) (I) and their salts and solvates. X_1 = Ser, Gly or Thr; X_2 = Leu, Ile, NIe, Val or Phe; X_4 = Ser, Gly, Har or Cay, Ala or Ser; X_5 = Leu, Ile, NIe, Val or Phe; X_6 = Arg, Har or Lys; R_1 = one or more omega-aminocarboxylic acid residues are coptionally derivatized and include b- as well as L-forms (in the case of optionally derivatized and include b- as well as L-forms (in the case of optionally derivatized and include b- as well as L-forms (in the case of antihifrombotic, cardiant, antiarticsclerotic, cytostatic, osteopathic, cardiartic, antihaginal, antipsoriatic, vulnerary, cerebroprotective, antihaginal, antipsoriatic, ophthalmological, antihaemalic, antihider, vasotropic, nephrotropic, nephrological function of alpha_vbeta_6-inceptin receptors, especially thrombosis, cardiac infarction, cornary heart disease, arteriosclerosis, tumors, osteoporosis, fibrosis, inflammation, infection, psoriasis and wound healing defliciency, other disclosed disorders to be treated include apoplexy, angina percoris, obtthe mological diseases (e.g. diabetic retinopathy, macular degeneration, myopia, ocular histoplasmosis or rubeotic glaucoma), rheumatoid arthritis, osteoarthritis, ulcerative colitis, crohm's disease, atherosaclerosis, restenosis after angioplasty, acute renal failure, renal inflammation or multiple sclerosis. (I) may also be useful in manyfictal biology and molecular biology; e.g. fluorescently labeled (I) may be used as diagnostic markers or (I) may be used to prepare affinity chromatography columns for purifying integrins.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes novel cyclic peptides (I), containing 8 amino acid residues and optionally further alpha,omega-aminocarboxylic acid cesidues. Cyclic peptides of formula Cyclo-(Arg-X.1-Asp-X.1-X.2-X.3-X.4-X.5-K.1) (I) and their salts and solvates. X.1 = Ser, Gly or Thr; X.2 = Leu, Ile, Nle, Val or Phe; X.3 = Asp, Glu, Lys or Phe; X.4 = Cly, Ala or Ser; X.5 = Leu, Ile, Nle, Val or Phe; X.6 = Arg, Har or Lys; R.1 = one or more omega-aminocarboxylic acid residues, having a length of 50-2500 mum; or is absent; the amino acid residues are optionally derivatized and include D- as well as L-forms (in the case of optically active aminoacids). The products of the invention have antithrombotic, cardant, antiarteriosclerotic, cycostatic, osteopathic, antiinflammatory, antibacterial, antidiabetic, ophthalmological, cerebroprotective, antianginal, antidiabetic, ophthalmological, antiarthritic, antirheumatic, antiulcer, vasotropic, nephrotropic,
                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                cytostatic; osteopathic; antiinflammatory; antibacterial; antipsoriatic; vulnerary; cerebroprotective; antianginal; antidiabetic; nephrotropic; ophthalmological; antiarthritic; antirheumatic; antiulcer; vasotropic; neuroprotective; alpha_vbeta_6'integrin receptor; thrombosis; tumor; cardiac infarction; coronary heart disease; arteriosclerosis; fibrosis; osteoporosis; inflammation; infection; psoriasis; wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New cyclic peptides, are alpha(v)beta(6) integrin receptor inhibitors useful e.g. for treating thrombosis, coronary heart disease, tumors, osteoporosis, inflammation or infections
                                                                                                                                    Gaps
DNA encoding (I) may be used for treating the same disorders as (I) itself. (I) are well tolerated and have good alpha_vbeta_6-integrin receptor inhibiting activity.
                                                                                                                                                                                                                                                                                                                                                                                                                  Cyclic peptide; antithrombotic; cardiant; antiarteriosclerotic;

cand pathological function of alpha_vbeta_6-integrin receptors, especially thrombosis, cardiac infarction, coronary heart disease, arteriosclerosis, thrombosis, cardiac infarction, coronary heart disease, arteriosclerosis, tumors, osteoporosis, fibrosis, inflammation, infection, psoriasis and common healing deficiency. Other disclosed disorders to be treated include apoplexy, angine pectoris, ophthalmological diseases (e.g. diabetic retinopathy, macular degeneration, myopia, ocular histoplasmosis or rubeotic glaucoma), rheumatoid arthritis, osteoarthritis, ulcerative colitis, Crohn's disease, atherosclerosis, restenosis after angloplasty, acute renal failure, renal inflammation or multiple solerosis. (I) may also be useful in analytical biology and molecular biology; e.g. fluorescently labeled (I) may be used as diagnostic markers or (I) may be used to prepare affinity chromatography columns for purifying integrins. DNA encoding (I) may be used for treating the same disorders as (I) itself. (I) are well tolerated and have good alpha_vbeta_6'integrin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes novel cyclic peptides (I), containing 8 amino acid residues and optionally further alpha,omega-aminocarboxylic acid residues. Cyclic peptides of formula Cyclo-(Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-Rrg-X_1-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cyclic peptide; antithrombotic; cardiant; antiarteriosclerotic; cytostatic; osteopathic; antiinflammatory; antibacterial; antipporlatic; vulnerary; cerebroprotective; antianginal; antidiabetic; nephrotropic; ophthalmological; antiarthritic; antirheumatic; antiulcer; vasotropic; ophthalmological; antiarthritic; antirheumatic; antiulcer; vasotropic; europercetive; alpha_vbeta_c'integrin receptor; thrombosis; tumor; cardiac infarction; coronary heart disease; arteriosclerosis; fibrosis; osteoporosis; inflammation; infection; psoriasis; wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New cyclic peptides, are alpha(v)beta(6) integrin receptor inhibitors useful e.g. for treating thrombosis, coronary heart disease, tumors, osteoporosis, inflammation or infections

CC Gly, Ala or Ser; X_5 = Leu, Ile, Nle, Val or Phe; X_6 = Arg, Har or Lys; R_1 = One or more omega-aminocarboxylic acid residues, having a content of 50-2500 mun; or is absent; the amino acid residues are optionally derivatized and include D- as Well as L-forms (in the case of optically active aminoacids). The products of the Invention have can intinflammatory, antibacterial, antipsoriatic, vulnerary, carcinatory, antibacterial, antipsoriatic, vulnerary, carcinatory, antibacterial, antidabetic, ophthalmological, cardiandian, antidabetic, ophthalmological, cardiantin, antidate, vasotropic, nephrotropic, antidatherin, antidated, ophthalmological, cardiac infarction and pathological function of alpha vbeta_6-integrin receptors, especially consured pathological function of alpha vbeta_6-integrin receptors, especially cumors, osteoporosis, fibrosis, inflammation, infection, psoriasis and wound healing deficiency. Other disclosed disorders to be treated include apoplexy, angina pectoris, ophthalmological diseases (e.g. diabetic rethopathy, macular degeneration, myopia, ocular histoplasmosis or rubbocic glaucoma), rheumatoid arthritis, osteoarthritis, ulcerative colitis, Crohn's disease, atherosclerosis, restenosis after angioplasty, also be useful in analytical biology and molecular biology; e.g. cused to prepare affinity chromatography columns for purifying integrins. DNA encoding (I) may be used dor treating the same disorders as (I) may be used for treating the same disorders as (I) are well tolerated and have good alpha_ubbeta_6-integrin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cyclic peptide; antithrombotic; cardiant; antiarteriosclerotic; cytostatic; osteopathic; antiinflammatory; antibacterial; antipsoriatic; vulnerary; cerebroprotective; antianginal; antidiabetic; nephrotropic; ophthalmological; antiarthritic; antithreumatic; antilucer; vasotropic; neuroprotective; alpha_vbeta_6=integrin receptor; thrombosis; tumor; cardiac infarction; coronary heart disease; arteriosclerosis; fibrosis; osteoporosis; inflammation; infection; psoriasis; wound healing.

This invention describes novel cyclic peptides (I), containing 8 amino acid residues and optionally further alpha, omega-aminocarboxylic acid residues and optionally further alpha, omega-aminocarboxylic acid residues. Cyclic peptides of formula Cyclo-(Arg-X_1-Asp-X_1-X_2-X_3-X_4-X_2-X_6-R_1) (I) and their salts and solvates. X_1 = Ser, Gly or Thr; X_2 = Leu, Ile, Nle, Val or Phe; X_3 = Asp, Glu, Lys or Phe; X_4 = CG (21, Ala or Ser; X_5 = Leu, Ile, Nle, Val or Phe; X_6 = Arg, Har or Lys: R_1 = one or more omega-aminocarboxylic acid residues, having a length of 50-2500 mum; or Is absent; the amino acid residues are coptionally derivatized and include D- as well as L-forms (in the case of optionally active aminoacids). The products of the invention have coptically active aminoacids). The products of the invention have antithrombotic, cardiant, antiaterciosolerotic, cytostatic, osteopathic, antithrombotic, antitanginal, antidabetic, ophthalmological, ophthalmological, on the correspondent of a phenomental of a phenoment of antiarthritic, antirheumatic, antipaeterial, antidabetic, ophthalmological, on the compact of antiarthritic, antirheumatic, antipaeterial, antidabetic, ophthalmological for control of alpha_vbeta_6-integrin receptors, especially thrombosis, cardiac infarction, corneary heart disease, arteriosclerosis, tumors, osteoprorsis, fibrosis, inflammation, infection, psoriasis and apoplexy, angina pectoris, ophthalmological diseases (e.g. diabetic cubectic glaucoma), rheumatoid arthritis, oclar histoplasmosis or rethoopathy, macular degeneration, myopia, ocular histoplasmosis or cubectic glaucoma), rheumatoid arthritis, octar histoplasmosis or cubectic flaucoma), rheumatoid arthritis, octar histoplasmosis or cubectic flaucoma), rheumatoid or multiple sclerosis; (I) may be used for treating the same disorders as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cyclic peptide; antithrombotic; cardiant; antiarteriosclerotic; cytostatic; osteopathic; antiinflammatory; antibacterial; antipsoriatic; vulnerary; cerebroprotective; antianginal; antidiabetic; nephrotropic; ophthalmological; antiarthritic; antirheumatic; antiulocer; vasotropic; neuroprotective; alpha_vbeta_f=integrin receptor; thrombosis; tumor; cardiac infarction; coronary heart disease; arteriosclerosis; fibrosis; osteoporosis; inflammation; infection; psoriasis; wound healing.
                                            cyclic peptides, are alpha(v)beta(6) integrin receptor inhibitors
                                                                  useful e.g. for treating thrombosis, coronary heart disease, tumors, osteoporosis, inflammation or infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 11;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Indels

This invention describes novel cyclic peptides (I), containing 8 amino acid residues and optionally further alpha, omega-aminocarboxylic acid residues. Cyclic peptides of formula Cyclo-(Arg X.1 + Asp. X.1 + X.2 + X.2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         also be useful in analytical biology and molecular biology; e.g. fluorescently labeled (I) may be used as diagnostic markers or (I) may used to prepare affinity chromatography columns for purifying integrins. DNA encoding (I) may be used for treating the same disorders as (I) itself. (I) are well tolerated and have good alpha_vbeta_6-integrin
neuroprotective; alpha_vbeta_6-integrin receptor; thrombosis; tumor; cardiac infarction; coronary heart disease; arteriosclerosis; flbrosis; osteoporosis; inflammation; infection; psoriasis; wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New cyclic peptides, are alpha(v)beta(6) integrin receptor inhibitors useful e.g. for treating thrombosis, coronary heart disease, tumors, osteoporosis, inflammation or infections

                                                                                                                                                                                                                                                                                                                   The present peptide is a fragment of the Streptococcal M protein peptide pld5 (Pruksakorn et al., J. Immunol. 149: 2729-2735 (1992)), used in the construction of a novel chimaeric peptide (CP). The CP comprises a B-cell conformational epitope from within pl45, unserted into a 2nd peptide, pref. an alpha-helical coil based on the GCN4 leucine zipper peptide (AAR97395). The 2nd peptide has a similar conformation, enabling the epitope to be presented in an immunologically active conformation.

The CP can be used in a novel detection/mapping process, e.g. to determine the min. epitope required to induce opsonic antibodies (AA), and in vaccines against up. A Streptococci. Ab raised against the CP can be used for immunotherapy and diagnosis, while the CP can be used diagnostically to detect Ab.
                                                                 New chimaeric peptide(s) including a conformational epitope -
inserted into a peptide having similar native conformation, useful

immunologically active conformation.

The CP can be used in a novel detection/mapping process, e.g. to determine the min. epitope required to induce opsonic antibodies (Ab), and in vaccines against gp. A Streptococci. Ab raised against the CP can be used for immunotherapy and diagnosis, while the CP can be used diagnostically to detect Ab.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present peptide is a fragment of the Streptococcal M protein peptide p145 (Pruksakorn et al, J. Immunol. 149: 2729-2735 (1992)), used in the construction of a novel chimaeric peptide (CP). The CP comprises a B-cell conformational epitope from within p145, inserted into a 2nd peptide, pref. an alpha-helical coll based on the GCN4 leucine zipper peptide (AAR97395). The 2nd peptide has a similar conformation, enabling the epitope to be presented in an
                                                                                                                                                         Streptococcal; M protein; peptide; p145; chimaeric; chimeric; B-cell; conformational epitope; alpha-helix; GCN4; leucine zipper; detection; mapping; opsonic antibody; vaccine; group A Streptococci; immunotherapy; diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New chimaeric peptide(s) including a conformational epitope -
inserted into a peptide having similar native conformation, useful
in vaccines and for determn. of minimal epitope(s) or for mapping

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The CP can be used in a novel detection/mapping process, e.g. to determine the min. epitope required to induce opsonic antibodies (Ab), and in vaccines against pp. A Streptococci. Ab raised against the CP can be used for immunotherapy and diagnosis, while the CP can be used diagnostically to detect Ab.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present peptide is a fragment of the Streptococcal M protein peptide p145 (Pruksakorn et al, J. Immunol. 149: 2729-2735 (1992)), used in the construction of a novel chimmeric peptide (CP). The CP comprises a B-cell conformational epitope from within p145, inserted into a 2nd peptide, pref. an alpha-helical coll based on the GCN4 leucine zipper peptide (AAR97395). The 2nd peptide has a similar conformation, enabling the epitope to be presented in an
                                                                                                                                                                                                                                                           Streptococcal, M protein; peptide; p145; chimaeric; chimeric; B-cell; conformational epitope; alpha-helix; GCN4; leucine zipper; detection; mapping; opsonic antibody; vaccine; group A Streptococci; immunotherapy; diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New chimaeric peptide(s) including a conformational epitope -
inserted into a peptide having similar native conformation, useful
in vaccines and for determn. of minimal epitope(s) or for mapping
amphipathic helices

                                                                                                                                                                                                                                                                                                                                                                                  The present peptide is a fragment of the Streptococcal M protein peptide p145 (Pruksakorn et al, J. Immunol. 149: 2729-2735 (1992)), used in the construction of a novel chimaeric peptide (CP). The CP comprises a B-cell conformational epitope from within p145, inserted into a 2nd peptide, pref. an alpha helical coil based on the GGMA leucine Zipper peptide (AAR97395). The 2nd peptide has a similar conformation, enabling the epitope to be presented in an immunologically active conformation.

The CP can be used in a novel detection/mapping process, e.g. to determine the min. epitope required to induce opsonic antibodies (Ab), and in vaccines against gp. A Streptococci. Ab raised against the CP can be used for immunotherapy and diagnosis, while the CP can be used diagnostically to detect Ab.

This invention describes novel cyclic peptides (I), containing 8 amino acid residues and optionally further alpha,omega-aminocarboxylic acid residues. Cyclic peptides of formula Cyclo-(Arg-X_1-Asp-X_1-X_2-X_3-X_4-X_5-X_6-X_1) (I) and their salts and solvates. X_1 = Ser, Gly or Thr; X_2 = Leu, Ile, Nle, Val or Phe; X_3 = Asp, Glu, Lys or Phe; X_4 = Cly, Ala or Ser; X_5 = Leu, Ile, Nle, Val or Phe; X_6 = Arg, Har or Lys; R_1 = one or more omega-aminocarboxylic acid residues, having a coptionally derivatized and include D- as well as L-forms (in the case of optionally derivatized and include D- as well as L-forms (in the case of optionally derivatized and include D- as well as L-forms (in the case of optionally derivatized and include D- as well as L-forms (in the case of optionally derivatized and include D- as well as L-forms (in the case of optionally derivatized and include D- as well as L-forms (in the case of optionally derivatized and include D- as well as L-forms (in the case of antinframmatory, antinatrenicsclerotic, cytostatic, osteopathic, antinathermosoric, antinated D-forms and path-logical function of alpha_bbetic, ophthalmological, antinated include cand path-logical function of alpha_bbeta_6-integrin receptors, especially thrombosis, cardiac infarction, coronary heart disease interiosclerosis, thorosis, infarmation, infection, psoriasis and applexy, angina pectoris, ophthalmological diseases interiosclerosis, critinated include applexy, angina pectoris, ophthalmological diseases (e.g. diabetic collitis, cronh, desease, atherosclerosis, restenosis after angloplasty, also be useful in analytical biology and molecular biology; e.g. Clluorescently labeled (I) may be used as diagnostic markers angloplasty, is also be useful in analytical biology and molecular biology; e.g. (I) may is a constant the propersion of the propersion
vulnerary; cerebroprotective; antianginal; antidiabetic; nephrotropic; ophthalmological; antiarthritic; antinheumatic; antinlcer; vasotropic; neuroprotective; alpha_vbeta_6·integrin receptor; thrombosis; tumor; cardiac infarction; coronary heart disease; arteriosclerosis; fibrosis; osteoporosis; inflammation; infection; psoriasis; wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         used to prepare affinity chromatography columns for purifying integrins. DNA encoding (I) may be used for treating the same disorders as (I) itself. (I) are well tolerated and have good alpha_vbeta_6-integrin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New cyclic peptides, are alpha(v)beta(6) integrin receptor inhibitors useful e.g. for treating thrombosis, coronary heart disease, tumors, osteoporosis, inflammation or infections

This invention describes a novel method (I) for detecting whether an individual is sensitive to Dermatophagoides (house dust mites). The method involves detecting sensitivity to house dust mites in patients, comprising combining a blood sample from the individual with 1 or more isolated T cell epitopes of the protein allergans I and II ((DP II) and (DP II)) from Dermatophagoides (house dust mites). 32 T cell epitopes with varying, defined amino acids sequences (given in the specification) may be used in (I). The sample and allergans are combined under conditions appropriate for the binding of blood components with the solypeptides. The extent of binding is then indicative of the scensitivity of the patient to house dust mites. (I) may be used to screen individuals for sensitivity to Dermatophagoides (house dust mites). The house dust mite is a major cause of a variety of allergic disorders such as asthma, rhinitis and ectopic dermatitis. AAY50360-Y50342 and earlived from Der P I, Der f II, Der f I and Der f II.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Inhibitor; stereochemically diverse compound production; gene expression, compound library generation; peptidomimetic compound; drug; HIV; cellular proliferation; viral replication; cellular signalling process; catalyst; E6-protein; E6-E6-AP pathway.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes peptides for treating sensitivity to house dust mite allergens from the genus Dermatophagoides. Peptides within the scope of the invention comprise at least one T cell epitope, or preferably at least two T cell epitopes of a protein allergen selected from the allergens Der p I, Der p II, Der f I, or Der f II. The invention also describes modified peptides having similar or enhanced therapeutic properties as the corresponding, naturally occurring allergen, but having reduced side effects. AAM71212 to AAM72200, and AAM72257 to AAM72330 represent peptides from the present

This sequence represents the paxillin LDI peptide, and was used to test compounds generated by the method of the invention, that were thought to be inhibitors of the E6.E6.PH pathway. The method is for generating a library of compounds having stereochemical diversity involves selecting desired synthetic precursors having a defined stereochemical and tendential paracting and repeating the synthetic precursors to give a compound having a specific stereochemistry and repeating the steps of selecting and reacting until the desired library is obtained. The method is useful for generating a library of peptidomimetic compounds having stereochemical diversity. The compounds may be useful as drugely e.g. for control of HIV production, cellular proliferation, viral replication, gene expression or catalysts, either as a ligand for a transition metal capable of mimicking a biological environment or by acting with a transition metal catalyst to effect a desired enantioselective chemical reaction. The compounds may turther be useful for generating biomaterials.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

                                                                                                                                                                                                                                                                                                                                                                                                                         à
                                                                                                                                                                                                                                                                        The invention relates to an isolated peptide of the major protein allergens of the genus Dermatophagoides, which comprises at least one T cell group of a protein allergen from Der p (DP) I. DE II. Der f (DF) I or DF II. The isolated peptide comprises at least two regions, each region comprising at least one T cell group of a protein allergen of the genus Dermatophagoides. The regions are derived from the same or different protein allergens of the genus Dermatophagoides. The peptides are useful for treating house dust mite allergy in humans. The peptides are also useful for detecting or diagnosing sensitivity to house dust mite protein allergens of the protein sensitivity to house dust mite protein allergens. The present peptides have similar or enhanced therapeutic properties as the naturally occurring allergen, but have resent sequence represents an allergenic T-cell epitope containing peptide derived from the Dermatophagoides allergenic proteins.

The method comprises: (a) supplying a three-dimensional (3-D) structure for E6bp; (b) supplying a 3-D structure for the candidate compound; and (c) comparing the 3-D structure of the candidate compound; of that of E6bp, where similarity in the structures is indicative of the ability of the candidate compound to interact with the HPV E6 transforming protein. The methods can be used to identify compounds which can be used to treat HPV infections, e.g. a HPV induced cancer such as cervical cancer. The methods of the invention allow rapid and efficient design and evaluation of compound for inhibiting infection by papillomavirus. The present sequence represents a E6 binding domain that can bind to the E6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cyclic peptide; antithrombotic; cardiant; antiarteriosclerotic; cytostatic; osteopathic; antiinflammatory; antibacterial; antipsoriatic; vulnerary; cerebroprotective; antianginal; antidiabetic; nephrotropic; ophthalmological; antiarthritic; antirheumatic; antidiacer; vasotropic; neuroprotective; alpha_vbeta_6-integrin receptor; thrombosis; tumor; cardiac infarction; coronary heart disease; arteriosclerosis; fibrosis; osteoporosis; inflammation; infection; psoriasis; wound healing.

This sequence represents a fragment of the principal 33 kDa protein of T.sergenti (see also R73947). T.sergenti is a bovine small piroplasma protozoa. This sequence contains the KER sequence which is the smallest immunogenic unit of the 33 kDa protein. This protein can be used in a vaccine for prevention of bovine small piroplasma disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Proteinase K reistant; Neisseria meningitidis; epitope; mapping;
Neisseria gonorrhoeae; antibody; detection; probe; surface protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Neisseria meningitidis antigen, highly conserved between different
strains - useful for prodn. of antibodies for immunisation against,
or diagnosis of, N. meningitidis infection
                                                                                                                                                                                                                                                      New bovine small piroplasma protozoa peptide(s) - contg. the Lys-Glu-Lys sequence, used for preventing infection or detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example 9 describes the epitope mapping of the 22 kD N. meningitidis protein. Identification was accomplished using 18 overlapping synthetic peptides (AAW04895 to AAW04912).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        also be useful in analytical biology and molecular biology; e.g., fluorescently labeled (I) may be used as diagnostic markers or (I) may be used to prepare affinity chromatography columns for purifying integrins. DNA encoding (I) may be used for treating the same disorders as (I) itself (I) are well tolerated and have good alpha_vbeta_6-integrin
                                                                                                                                                                                                                                              This invention describes novel cyclic peptides (I), containing 8 amino acid residues and optionally further alpha, omega-aminocarboxylic acid
                                                                                              New cyclic peptides, are alpha(v)beta(6) integrin receptor inhibitors useful e.g. for treating thrombosis, coronary heart disease, tumors, osteoporosis, inflammation or infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;

The present invention describes a method of screening a cytokine-like peptide, comprising searching for a peptide, which is capable of expressing the biological activity of the cytokine, by binding to an antibody which has an activity of neutralising a cytokine, from amongst peptides not having been confirmed as being with the biological activity of the cytokine. The peptides identified using the method are applicable as low-molecular peptide mimics of cytokine for treating e.g. viral
                                                                                                                                                                                                                                                            Cytokine-like peptides screened by binding activity with antibody having activity of neutralising cytokine, capable of expressing biological activity of cytokine, useful as low-molecular peptide mimics for treating e.g. viral diseases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; foetal liver; gene expression; single exon nucleic acid probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Peptide #11929 encoded by human foetal liver single exon probe.

                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Protein #9269 encoded by probe for measuring heart cell gene expression.
                                                                                                                                           liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/bublished_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Single exon nucleic acid probes for analyzing gene expression in human

```

```
CC AMAZ1535-ABA41305). The present sequence is a protein encoded by one such problem of the problem of a protein encoded by one such problem. The probes may be used for predicting, measuring and displaying consistent in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, clasming, staging, monitoring and prognosing diseases of the chuman heart and vascular system e.g. cardiovascular disease.

CC human heart and vascular system e.g. cardiovascular disease.

CC human heart and vascular system e.g. cardiovascular disease.

CC hypertension, cardiac arrhythmias and congenital heart disease.

CC hypertension, but was obtained in electronic form part of the printed car fitp.wipo.int/pub/published_pct_sequences.

CC at ftp.wipo.int/pub/published_pct_sequences.

Patent No. 6248575

GENERAL INFORMATION:
APPLICANT: Elizabeth J. Golightly
TITLE OF INVENTION: Nucleic Acids Encoding Polypeptides
TITLE OF INVENTION: Having L-Amino Acid Oxidase Activity
FILE REFERENCE: 5556.200-US
CURRENT FILING DATE: 1999-05-18

CURRENT FILING DATE: 1999-05-18

EARLIER APPLICATION NUMBER: 09/080,428

EARLIER APPLICATION NUMBER: 09/080,428

MUMBER OF SEQ ID NOS: 12

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 9

LENGTH: 24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         100.0%; Score 20; DB 4; Length 20; 100.0%; Pred. Sequence 1, Application US/09299473A

Patent No. US20020099008A1

SERVET INFORMATION:

APPLICANT: Twardzik, Daniel R

APPLICANT: Felker, Thomas S

APPLICANT: Stefan, Paskell L

TITLE OF INVENTION: LOOP PEPTIDE AND TGF ALPHA FOR

TITLE OF INVENTION: STEMILOOP PEPTIDE AND TGF ALPHA FOR

FILE REFERENCE: STEMILOO

CURRENT APPLICATION NUMBER: US/09/299,473A

CURRENT FILING DATE: 1999-04-26

NUMBER OF SEQ ID NOS: 4

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 1

LENGTH: 50
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ó
